PROFESSIONAL SUMMARY

Full-stack software developer with a Computer Science degree (major in Cybersecurity), experienced across React, Angular, Python, Node.js, C#/.NET, and PHP, with strong testing, database, and cloud skills (GCP at work; AWS in a personal project). Comfortable owning features end to end, with Claude and Copilot in my daily workflow.

PROFESSIONAL EXPERIENCE

Junior Software Developer — Kraken Sense *May 2026 – July 2026*

Contract, Full Time | Oakville, ON, Canada

- Owned an internal employee and task management platform (FastAPI, React) with Kanban and Scheduler views as the main full-stack developer, including its deployment to Google Cloud Platform.
- Fixed critical Scheduler bugs and shipped configurable entry times, drag-and-drop auto-rescheduling, and a task timer from direct coworker feedback, growing daily active usage from roughly 20% to about 70% of the company and reducing Scheduler error reports to zero.
- Enhanced the company-wide bug/feature-request system (shared reporting API across all internal apps) with structured ticket metadata and app-based organization, roughly doubling weekly ticket volume and resolutions.

Junior Software Developer Intern — Agro-Costa SAS *May 2024 – December 2024*

Internship | Barranquilla, Colombia

- Redesigned order picking in a Warehouse Management System (JavaScript, ASP.NET) from per-item entry to a transactional model and added barcode generation for scanning, cutting picking time by roughly 60–70%; also added order assignment and an outbound order tracking hub.
- Built a role-based access control (RBAC) module for a customer-facing inventory search app (PHP, JavaScript), replacing manual database edits and increasing logged user engagement by roughly 30%.
- Built a C# WinForms tool replacing a manual Excel-based inventory sync, cutting manual effort by about 90%.

PROJECTS

Marquee — Distributed Social Movie-Discovery App *July 2026 – Present*

- Building a real-time full-stack app (ASP.NET Core, Angular, PostgreSQL, Redis, RabbitMQ, SignalR) with an outbox pattern and Cognito authentication; on a single t3.small it held 1,000 concurrent WebSocket connections with zero failures.
- Deployed to AWS as a personal infrastructure project using the CDK (C#): EC2, CloudFront, S3, ECR, SSM, CloudWatch, two Lambda functions, and a GitHub Actions CI/CD pipeline via GitHub OIDC.

Grasp — RAG-Based Study Companion (Video Transcripts) *September 2026 – Present*

- Building a FastAPI and React/TypeScript study companion that chats with, and generates flashcards and quizzes from, YouTube transcripts using RAG with timestamp citations and PostgreSQL/pgvector.
- Routed every LLM call through one wrapper handling retries, timeouts, and token logging; tested with Pytest and containerized with Docker Compose.

Applyt — Self-Hosted Job Application Tracker *June 2026 – August 2026*

- Built a local-first tracker (Node.js, Fastify, SQLite, React; TypeScript) with a Chrome Manifest V3 extension and direct Anthropic, OpenAI, and Ollama API integration for resume tailoring, with token/cost tracking.

HandLock — Windows Biometric File/Folder Security App *July 2026 – August 2026*

- Built a Windows app that encrypts files and folders (Fernet) and gates access with face recognition (OpenCV), a hand-gesture match and blink liveness check (MediaPipe) instead of a typed password.

Simple Rentals — Full Stack Web App *January 2025 – August 2025*

- On a small team, responsible for the Django REST/PostgreSQL backend, a scikit-learn recommendation system, and testing and CI/CD (Cypress, Vitest, GitHub Actions).

EDUCATION

Bachelor of Computer Science – Honours (Co-op), With Distinction *2021 – 2025*

Major in Cybersecurity | Conestoga College, Waterloo

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, Java, C, C++, PHP, SQL, HTML5, CSS3
Web & Backend: React, Angular, FastAPI, Node.js, ASP.NET Core, Django, PHP, REST APIs, SignalR, WinForms
Databases & Messaging: PostgreSQL (incl. pgvector), MySQL, SQL Server, MongoDB, SQLite, Redis, RabbitMQ
Testing & QA: TDD, Pytest, Cypress, Vitest, Playwright, k6, Testcontainers, xUnit, manual QA
Cloud & DevOps: GCP, AWS (personal project: CDK, EC2, CloudFront, S3, Cognito), Docker, GitHub Actions, Git
AI-Assisted Development: Claude, GitHub Copilot, MCP integrations, OpenAI/Anthropic/Ollama APIs, RAG
Certifications: AWS Certified AI Practitioner (Sept 2026), AWS Certified Cloud Practitioner (Sept 2026)
